OVERVIEW

Apex Facilities Compliance Services Group, doing business as Apex Facilities Support Services, is a procurement-driven, compliance-focused contractor specializing in facility support, technical project management, and equipment installation oversight. Our work is built on 31 years of operational leadership in regulated, high-volume environments.

We support federal, public, and commercial facilities through disciplined planning, strategic sourcing, logistics coordination, and cross-functional installation support. Our leadership's experience includes fluid filling and packaging equipment installations, frozen blast freezer and robotic palletizing system integration, large-capacity tank installations, and Factory Acceptance Testing (FAT) through participation on cross-functional NEST teams.

Apex also develops clear, common-language SOPs from OEM engineering documentation, supporting safe, consistent, and compliant operations. We bring regulatory experience across FDA, USDA, OSHA, IMS, BRC, SQF, and GMP environments and operate to the documentation standards expected in federal contracting.

Apex is registered in SAM.gov (UEI UH5PDBTABDC1, CAGE 246S1) and is positioned to support prime contractors and federal agencies with reliable, technically disciplined, and compliance-aligned facility support.

CORE COMPETENCIES

Procurement & Strategic Sourcing

Capital equipment, facility upgrades, materials, and contractor services; vendor evaluation and budget oversight.

Equipment Installation Oversight

Staging, utility coordination, safety validation, sanitation readiness, and commissioning support.

Logistics & Facility Coordination

Shipping, receiving, inventory accuracy, and installation staging across procurement, operations, and installers.

Technical Project Management

Planning, coordination, commissioning, and operational readiness across maintenance, quality, OEM, and safety teams.

Regulatory Compliance & Safety

Internal audits, root-cause investigations, safety program development, and compliance documentation (FDA, USDA, OSHA).

SOP Development & Technical Documentation

OEM manuals translated into common-language SOPs for operations, sanitation, safety, and maintenance.

DIFFERENTIATORS

- Procurement discipline paired with hands-on technical project management.
- Cross-functional installation experience with engineering, QA, maintenance, and OEM vendors.
- FAT and engineering review through NEST team participation.
- OEM documentation converted into clear, actionable SOPs.
